A: On the back of the tuner there is a sticker with the logo, serial number, build date, and the name of the product. This is my tuner, with the serial number 037906041. I get the serial number from the sticker on the back of the tool (it is part of the tool). As with any other product, you need to check the serial number of the tuner against the software that is installed on your computer. For my tuner, I used the serial number 037906041 and the build date was 2011-08-25. To check the serial number: Right click on the program. Select "Properties". Select the "Details" tab. In the "Local Publisher" field, type in the full name of the software company. (DiabloSport or its product name). In the "Local Publisher ID" field, type in the full name of the software. (DiabloSport) Click OK. The "Local Publisher ID" field contains the serial number. This is what I see on my tuner (build date, serial number, and software company): Q: How can I merge two IDataErrorInfo properties into one property that combines them? I have a DataTemplate for a ComboBox which displays a drop down list of values. Each ComboBoxItem is of type SomeType and implements IDataErrorInfo. In the XAML, I've written this: The problem
