This is a crack version of a well known loader program that uses legal Windows Activation Technologies (WAT) to activate Windows 7 loader 1.9.3 By DAZ is a fast loader and has an auto-detect mode that can change based on your harddisk layout. it works very well with . I have had two new computers over the last couple of years, and the one that came with a Windows 7 x64 edition. I decided to try to activate the system with the Windows Loader, as I know my friend used it before and it worked for him, but I still can't seem to get the "fiasco". It runs, detects the system as legal, but will not activate. Every time. I have tried to use the loader version found in this image and also the windows loader 2.0.2 v1.5.7.exe The old computer I have used loads fine, but it does not pass the WAT test. I have tried to use the Windows loader 1.9.3 By DAZ as this program has worked for me before on other versions of Windows, and I have also used the Windows Loader 2.0.2 v1.5.7.exe in the past. Do you have any suggestions? I'm at my wits end with the whole thing. A: We have just got a very similar situation. For the first time I could have activated my Windows 7 64 bit completely with the Windows Loader. This is probably the first time I want to say that the activation is working for the first time ever. After just changing a few settings with the loader application it passed the activation. Here are the steps what I followed: I chose a free system. Before I started to configure the loader I plugged my W7 DVD in my external DVD drive, and I found a system already activated. Tested the activation through the Windows loader. Tested the activation with the DVD that I put in my DVD drive, and it passed successfully. The activation of my PC was successful. Tested the activation with the DVD in my external DVD drive. Some of these steps I did several times, because I am not sure if it was a success or not, but after I did step 4 the activation was successful. You can follow
