
Proyectar Con La Naturaleza Ian Mcharg Pdf Download

Ian L. McHarg: Proyectar con la naturaleza Find, read and cite all the research you need on . Category:Ecology1. Field of the Invention The invention relates to a sheet material conveying apparatus including a base having first and second conveyance portions arranged in a widthwise direction of the base, first and second conveyance rollers, a driving motor, a pulley mounted on a rotary shaft of the driving motor, and a tension belt for connecting the first and second conveyance rollers and the pulley. The first conveyance portion is arranged between the first and second conveyance rollers to form a first conveyance loop. The second conveyance portion is arranged downstream of the first conveyance portion to form a second conveyance loop. The tension belt extends between the first and second conveyance portions and is coupled to the pulley. 2. Description of the Related Art A conventional sheet material conveying apparatus described above is generally arranged in a sheet-conveying mechanism of a printer or the like. The first conveyance portion is arranged in a direction of conveying a sheet material along a first conveyance path to form a first conveyance loop along the first conveyance path, and the second conveyance portion is arranged in a direction of conveying the sheet material downstream of the first conveyance portion along a second conveyance path to form a second conveyance loop along the second conveyance path. When a sheet material is inserted in the first conveyance path, the sheet material is conveyed along the first conveyance path along the first conveyance loop. When the sheet material is conveyed in the second conveyance path along the second conveyance loop, the sheet material is conveyed along the second conveyance path and further conveyed along the first conveyance path along the first conveyance loop. In this manner, the sheet material can be conveyed along two conveyance paths through the sheet material conveying apparatus. The sheet material conveying apparatus described above is provided with a driving motor such as a DC motor, and a pulley connected to the rotary shaft of the driving motor. The pulley is connected to the tension belt extending between the first and second conveyance portions and is rotated along the first and second conveyance portions. In the sheet material conveying apparatus, the tension belt is stretched between the first and second conveyance portions. When the driving motor is driven, the tension belt is rotated and caused to rotate the pulley.
