With the advent of optical fiber communication systems, optical fiber communication lines are typically protected from a great distance from the main network by optical cable glands. Such cable glands are constructed to prevent the inadvertent disconnection of the optical fiber. The use of mechanical cable glands is known in the art. The use of a screw-type mechanical joint is also known in the art. One such screw-type mechanical joint is disclosed in U.S. Pat. No. 4,745,971 to Griffiths. In Griffiths, a clamp is attached to each optical fiber by a screw that passes through the clamp and is screwed into the optical fiber. The screws are held in place by a protective cap that is retained on the fiber ends. The disadvantages of such a screw-type mechanical joint are numerous. In particular, the screws tend to loosen with use. As a result, when the screws loosen, it is difficult to re-secure the screws with the necessary amount of tension. Further, the optical fibers must be

straight and the screw must be parallel to the center axis of the fiber. Since this is not always possible, optical fibers must be bent at the point where they are inserted into the clamp. This bending of the optical fiber causes a loss of optical signal. Another disadvantage with the screw-type mechanical joint is the manufacturing difficulty. The precise alignment of the optical fibers and the

state teeming with growing numbers of older residents, they're falling victim to a bigger
and growing threat. Seniors are dying by the thousands from gunshot wounds,
according to a new study. It's a disturbing figure, and one that New Jersey state officials
say they want to do something about. In the Garden State, older citizens are dying by
the thousands from gunshot wounds. According to the most recent data, gunshot
wounds kill an estimated 1,750 residents over age 65 a year, according to the State
Health Department. The state's population of seniors'. At the New Jersey Department
of Health, we take gunshot wounds seriously. In fact, we set out to see what might work
in the Garden State. Specifically, we looked at how the state is approaching the
problem, and how we might work with our colleagues at the Centers for Disease
Control and Prevention. We looked at how the state is approaching the problem, and
how we might work with our colleagues at the Centers or the Centers. .If the state has
been successful, we are interested in the initiatives we can replicate'. If the state has not
