Heredis 2014 keygen for mac Heredis 2014 keygen for mac windows Heredis 2014 keygen for mac Heres An Example: my\_script\_name #!/bin/bash echo "\033]2;7;#9F89FC\007" echo "\033]2;7;#7F8F8F\007" echo "\033]2;7;#DD8DD8\007" echo "\033]2;7;#CC7CCC\007" echo "\033]2;7;#FF8F8F\007" echo "\033]2;7;#8F8F89\007" echo "\033]2;7;#DAD9F0\007" echo "\033]2;7;#DAD9D8\007" echo "\033]2;7;#DAD9D8\007" echo "\033]2;7;#DAD9D8\007" echo "\033]2;7;#FF8F8F\007" echo "\033]2;7;#8F8F89\007" echo "\033]2;7;#DD8DD8\007" echo "\033]2;7;#CC7CCC\007" echo "\033]2;7;#FF9F9F\007" The line that gets highlighted in yellow is the one that is being replaced by the color of my "Select Color" dropdown. How do I write a loop that will run this function for the number of colors in my dropdown? So I can replace the highlighted line above, with: echo "\033]2;7;#" + color + "\007" A: Using bash you could do this like #!/bin/bash colorArray=() echo "Hi" colorArray+=("yellow") colorArray+=("orange") colorArray+=("red") echo "\033]2;7;#" \${colorArray[@]} "\007" echo "\033]2;7;#" \${colorArray[@]} "\007" Which outputs > echo "Hi" > Hi > echo "\033]2;7;#" \${colorArray 2d92ce491b
