The present invention relates to the preparation of high-performance polyamide rubber compositions, which exhibit excellent processability, curing properties and heat resistance, and it relates also to moldings, articles and molded articles obtained from such rubber compositions. Although polyamide is a heat-resistant polymer having high strength, its processability is poor, i.e. processing is carried out at a high temperature and the processing time is long. However, when the polyamide is mixed with a thermoplastic resin such as an ethylene-vinyl acetate copolymer or an ethylene-ethyl acrylate copolymer, the mixture becomes a thermoplastic material having excellent processability and it is possible to mold or process the mixture by means of injection molding, extrusion molding or the like. However, the polyamide and the thermoplastic resin are not compatible and when they are melted together, it is difficult to obtain a homogeneous composition and, hence, the processability of the composition is inferior. Accordingly, various methods have been proposed for obtaining compositions which exhibit excellent processability and have excellent curing properties. For example, there has been proposed a method in

While you should be glad you have a cold—after all, you get to go to bed, snuggle with your honey, and have someone bring you ginger ale—you shouldn't go to the doctor with a cough. There are plenty of reasons to see a doctor, but a cough that has a red or streaked throat isn't one of them. Most colds don't come with a fever, so if your cough is accompanied by shortness of breath, trouble breathing, or chest congestion, you probably should see a doctor. A sore throat with cough is a different story—it's not necessary to call your doctor. 2d92ce491b
