winnersQ: How can I make footnotes fall over the end of a line rather than under it? I'd like to use the tufte-classes package to format my manuscript in preparation for publication.

The footnotes are fine, but for some reason the footnote text always falls under the line. Is there any way I can make them fall over the end of the line? MWE `\documentclass[oneside,twoside,final]{memoir}` `\usepackage{tufte-book}` `\usepackage{lipsum}`

`\usepackage[flushright]{footmisc}`

`\usepackage{setspace}` `\onehalfspacing`

`\renewcommand{\familydefault}{\sfdefault}`

`\usepackage{tikz}`

`\usetikzlibrary{positioning}`

```
\begin{document} \title{\tikz ode[draw]
{title};} \author{ } \date{\today} \maketitle
\textsc{\footnote{ This footnote goes to the
bottom of the page, where it is put by
\lipsum} } \printfootnotetexts
\end{document}
```

A: The package footmisc was already an example in the manual for the

2014 . stories/2316308-chotuskon-bengali-
movie-torrent-13-computo-ragusa . Mar 17,
2014 Mar 7, 2020 is there any way to limit
the output to just the date range and location
of the files? Currently I am trying to use grep
to parse out the date from the file path: find
-exec sh -c "grep -o
'[0-9]{2}\V[0-9]{2}\V[0-9]{4}' { };" and so far
I am getting a bunch of gibberish as output
when I run it with the find command. A: As
your date is in the file itself, you don't need to
use grep. You can use sed like find -iname
'*20130510*' -exec stat -c '%Y%m%d' { } \; |
sed's/^\([0-9]{4}\)\V\([0-9]{2}\)\V\([0-9]{2}\)\.
*\$/\3/' Replace the / with - in the script.
Explanation The \3 will capture the data in
s/.*\3/. Since you have spaces before and

after the date, you need to use the -c flag. The \c will match a literal 'c'. [A case of midgut carcinoid with multiple liver metastases]. We report a case of a 60-year-old woman who was first diagnosed with carcinoid syndrome due to multiple liver metastases. First, we performed a cholecystectomy, and then, 10 months later, liver resection. Histological examination of the removed specimens revealed multiple liver metastases from the carcinoid. Considering that the patient had been in a deteriorated condition with massive ascites, splenectomy was performed and histological examination revealed that the carcinoid was confined to the submucosal layer of the stomach. The patient died from her disease 1 year after the operation.

Q: Keep getting false errors when implementing a database I'm a newbie at coding (AS
