MPEG Header Corrector is a compact utility designed to help you fix the MPEG files that have been partially downloaded or incorrectly encoded. As the name clearly states, it enables you to fix the problems related with the MPEG header. In order to organize the audio and video content, each MPEG file contains a header which describes the content. The header also synchronizes the soundtrack with the video frames in order to ensure a smooth playback. This tool is designed to fix the problems related with the MPEG header which prevent you from opening the file. It may also help you repair the files that are out of sync or that have issues in playing certain video frames. The program has a simple interface that only allows you to select the file you need to fix and the output location. It does not require any previous experience in video editing since you only need to click a button in order to save the repaired file to the new location. It does not include any documentation and does not explain what modifications are being made to the file during the repair.

However, it is lightweight and does not need to be installed in order to use it with your broken MPEG files. The MPEG Header Corrector can prove to be useful when you need to repair a MPEG movie that has a corrupt header. Unfortunately, it is not being actively developed so it might fail to repair the latest video formats. If you have ever installed a proprietary application, you will know that the installer is usually accompanied with various files that are used to install the software. For example, when you install a video editing tool, you will probably be offered to install a license file as well. In fact, you might not even need to install the license at all, if the license key is embedded into the application itself. The license key is a string of alphanumeric characters that is usually located inside the application's exe file. You can find it using a text editor, such as Notepad.exe. The license key string will look something like this: However, you can also find it in the license file, located in the same folder as the application's exe file. It will have the same format as shown above and the only difference will be the presence of the "-----BEGIN" and "-----END" strings. License keys are rarely, if ever, included with free software packages. Instead, developers usually provide the option to obtain them from an online service or through e-mail. However, the availability of these keys

changes frequently. As such, it is advisable to try and avoid the online services that change their online services without any notice. The good news is that, if you already installed a software package, you can easily find the correct license key using a specialized program. Fortunately, such programs are usually available for free.
