AutoCAD is one of the world's most popular 3D design software applications. The company claims more than 3.5 million active users, with those in Europe and Asia dominating its sales. With recent versions, AutoCAD has included support for 3D printing and immersive environments, such as the Internet of Things and Industry 4.0, and added features such as connected mobile devices and cloud computing. AutoCAD 2016, released in May 2016, introduced significant new capabilities to the application. The creation of AutoCAD was supported by a great deal of economic incentives. The various types of AutoCAD available today include the standard desktop version, which runs on Windows, Mac OS X, and Linux, the student version of AutoCAD LT (a free version of AutoCAD available for students), and the rendering software, AutoCAD LT Render (a free version of AutoCAD available for schools, colleges, and universities). History Autodesk, Inc. was founded in 1982 by Arnold Abramovitz, Randy Farmer, and Mark J. McDonnell to develop CAD software for the auto industry. In 1982, they created a standard 2D drafting program, AutoCAD, based on NCR's Auto-Draft computer-aided design (CAD) application, which was released as a beta version in 1983. This initial version was named AutoCAD (a contraction of auto drafting and CAD). The name AutoCAD was suggested by an employee, Steve Wigley. The application is also known as Autodesk AutoCAD, and AutoCAD, the software version number. The original version of AutoCAD was developed for the Apple II and Commodore 64, and was later ported to the PC, where it competed with similar products such as Cadsoft's MicroCAD and MicroStation. In 1983, the first version of AutoCAD was launched for personal computers running the CP/M operating system, and in 1984, the first version for DOS was released. Version 1.2, released in 1985, was the first version of AutoCAD to use AutoLISP, an application programming interface (API) developed by the company for writing extensions to AutoCAD. Over the next two decades, more than a dozen releases of AutoCAD were produced, and AutoCAD LT (AutoCAD in the late 1990s was not the same as the current AutoCAD), which could

As a computer-aided design (CAD) software application, AutoCAD is used to draw objects on a computer screen by a designer. Designs are produced from multiple 2D and 3D models created in a graphics editing application. The resulting drawings can be presented to the client as a finished printed design, or saved as a draft document. AutoCAD can be used for nearly all types of drafting projects such as architecture, interior design, electrical design, and landscape design, among many others. The software does not offer any automatic "design review" software that is capable of producing a perspective drawing or 3D model of the proposed design. The 3D model can be later viewed in another CAD program such as CATIA. AutoCAD files can be made available online, which increases the number of clients. Only 50 160 I believe in the rule of law and the "law" I learned from my mother and father's influences. What I learned from the documentary "Abortions in the '70s" was all I needed to know about abortion and I got a couple abortions in the '70s. Yes, I am pro-life and I believe women have a right to choose, but I do not believe that it is the job of the government to tell a woman what to do with her body. Yes, I was raped at age 13 by a local man and had an abortion and that was traumatic for me. My father died of a stroke in 1976 and I had to go back home to my parents. It was traumatic for me and at the time, I did not think that I could have children. My parents insisted that I have an abortion. I told them that I would not because I did not want to be pregnant and my parents said that was my choice. I had a friend who was a social worker and she told me that she believed in abortion. I called my mother and told her that I was going to have an abortion and she said that "It is your choice and that you have a right to choose what you want." I did not want to have an abortion and I did not want to be pregnant and had a feeling that I had been raped and I was still in shock over my father's death. I was told by the woman in the abortion clinic that there
