It may crash with some older version of RAR archives, but usually the crashes are because the utilities are being used too extensively by the same user. Unrar Extract and Recover aims to extract files from many archives, but it will only be completed when one or more archives are done. It doesn't have this problem. It never loads files into memory but rather it will simply verify the integrity of the archive, it will always leave the archive in a state which can be opened by other utilities. You can use the utility to extract files from several archives in parallel without having to wait for one archive to be completed before extracting files from another.
