" Trivia See also Adobe Photoshop Category:Adobe PhotoshopThe pattern of ganglionic pacemaker stimulation and the mechanism of D-tubocurarine-induced inhibition. In chloralose-anaesthetised dogs, the isolated vagus nerves were stimulated at different frequencies and with various high-threshold pulse shapes, and the effects on heart rate, arterial blood pressure and efferent sympathetic activity were studied. Under these conditions there was a consistent and constant pattern of inhibition in the sympathetic outflow during low-frequency stimulation. The size of the inhibition was directly related to the frequency of stimulation, but the time course of inhibition was usually fairly rapid and was independent of frequency. When the high-threshold impulses were used, they always caused inhibition and when the
